## Heather Tripp's Recommendations for Filming and Editing

**Cameras:** We use very high end, but any camcorder will do a decent job these days. HD isn't important for the web since most websites are lower resolution. HD is only good for television and HD monitors. For editing equipment, we used Final Cut Pro, but here are some other options:

### **Free Video Editor:**

Windows Movie Maker (for windows) <http://download.live.com/moviemaker/>

iMovie (for mac) <http://www.apple.com/ilife/imovie/>

### **Professional Video Editor:**

AVS Video Editor (for windows)

Adobe Premiere (for windows)

Sony Vegas Pro (for windows)

Final Cut Pro (Mac)
